

AI Militarization: Compute = Firepower

Military AI Budgets (2026)

US FY2026 total defense budget: \$1.01T

AI in Active Combat

Israel's Lavender System

Analyzed: 2.3 million Gaza residents
Marked targets: **37,000 people**
Approval time: **20 sec/person** (virtually no human review)
False-positive rate: **~10%** · Allowed civilian collateral: **15-20/target**
Generated in days = one year of manual work
Source: 972 Magazine, April 2024

AI Weapon Proliferation

Ukraine Drones

2024: 2.2M units → 2025: **4.5M units**

AI autonomous target lock-on

Military Drone Makers

2022: 6 firms → 2024: **200+ firms**

33x growth in 2 years

AI Cyberattacks

2025: **28M+ incidents** (+72% YoY)

39% state-sponsored

US AI Weapons Programs

CCA "Loyal Wingman": ~1,000 autonomous combat drones (2 prototypes in testing)
LRASM C-3: AI autonomous anti-ship missile, range doubled to ~1,600km · Replicator: thousands of cheap autonomous systems · Maven: LLM-driven 100% machine intelligence

AI makes war "easy" — and that is the greatest danger to peace

Autonomous weapons eliminate domestic casualties → political threshold for force drops drastically

No more "whose kid goes to war" opposition

Weak nations' AI military budgets = a fraction of strong nations'. The gap grows exponentially.
