

HALO: What Is Losing Value, What Is Gaining It

Heavy Assets, Low Obsolescence — durable value lives in what cannot be digitally copied

World of atoms · resists

AI can copy code. It cannot copy a refinery

- Prime urban land (non-replicable)
- Energy and infrastructure
- Physical gold
- Your own health

- Physical presence: electrical, welding, plumbing
- Human trust: care, counselling, community
- Judgement and liability: surgery, advocacy
- Taste and aesthetic judgement

- "I hold something AI cannot copy"
- Trust / physical presence / rare experience / licensure

World of bits · being hollowed out

When generation cost goes to zero, so does price

- Pure-software equity
- Commercial property fed by white-collar spend
- Property in declining cities
- Information-intermediary business models

- Pure information processing
- Pure coding ability
- Pure knowledge recall
- Standardised process execution

- "I do a thing AI can also do"
- The moat is being dug out from under you

Assets

Skills

Yourself

Ask yourself one question: is my value HALO-type or SaaS-type? That call is worth far more than "learning AI"
