

The Longevity Paradox: Living Longer, But Who Pays?

Pension Insolvency

US Social Security

Exhausted 2033-2034 → can only pay 77-81% benefits

China Pension

~2035 depletion · Gap 8-10 trillion yuan

Japan

2050 dependency ratio >0.8 · <1.25 workers per retiree

Worker:Retiree Ratio

1960: 5.1:1 → 2025: 2.8:1 → 2040: 2.1:1 (needs ≥2.8 to function)

Cost of Longevity

Every +1 year of life = 3-5% more pension liability (IMF)

Live to 80 (current)

Baseline

Live to 100

Liability ×2

Live to 120

Liability ×3

Retirement vs Work Duration

Current: Work ~40 yrs, Retire ~15 yrs

120 yrs: Work ~40 yrs, Retire ~55 yrs — Retirement longer than work

Price of Longevity

CAR-T: >\$1,000,000 · Immunotherapy: \$150-200K/yr

US rich-poor health lifespan gap: 7-9 yrs · Global: Norway 83 vs Chad 52

The AI-Longevity Paradox

AI accelerates medicine → people live longer → pension gap grows → but AI cuts workers who fund pensions → gap accelerates

Pensions tax human labor. AI shifts value creation from labor to capital — robots don't pay Social Security.
