

History of Tech Revolutions: Net Creation, Not Net Destruction

Every wave has destroyed jobs — and created more of them

WEF 2025 forecast: global job change by 2030

The ATM Paradox

Tellers per branch: 20 → 13 (↓35%)
Urban branches: ↑43% · Total tellers: 300K→600K (↑100%)
Lower unit cost → more branches → more total employment

Invisible New Jobs

Today in the US, **1 in 3 jobs**
did not exist 25 years ago
— McKinsey

Note: WEF forecasts may run optimistic, but the direction holds — every tech revolution has ended in net creation
