

The Age Crisis Reversal: AI Favors Seniority

Before AI

The "35-Age Crisis"

Young workers: cheap, overwork, replaceable → preferred

Senior workers: expensive, hard to manage → cut at 35

Company logic: 3 juniors = 1 senior, but cheaper

After AI

The "25-Age Crisis"

Senior+AI: 1 person output = 1 senior + 3 juniors → more needed

Junior workers: AI does their work → can't get in

Company logic: 1 senior+AI > 1 senior+3 juniors

Harvard Study (2025): 62M workers · 285k companies

AI-adopting firms: **entry-level hiring** ↓ 7.7-10% (within 6 quarters) · **Senior roles: nearly unchanged**

Entry-Level Collapse

US big tech new grad hiring

↓ 50%+ (2019 → 2024)

US entry-level job postings

↓ 35% (2023 → 2025)

Fortune 500 internships (tech)

↓ 34% (2022 → 2024)

UK tech graduate positions

↓ 46% (2024) expected

China graduate job postings

↓ 22% (H1 2025)

China Youth Unemployment

Age 16-24: **18.9%** (Aug 2025)

2025 graduates: 12.22M (record) · Hiring ↓ 22%

↓ 53% more The Paradox

AI boosts junior productivity more (27-39% vs 8-13%)

The Broken Career Ladder

Senior promoted/leaves → Mid fills up → Junior fills up → **New hire enters** ← AI cuts this link

No entry-level jobs = no ticket in = never becoming "experienced" · A generation's career may end before it begins

The crisis didn't disappear — it shifted down a decade. From "fired at 35" to "can't get in at 25."
